Course Details

Department	Electrical and Electronics Engineering
Course Language	English
Course Level	Undergraduate <input checked="" type="checkbox"/> Graduate <input type="checkbox"/>
Mode of Delivery	Face to Face <input checked="" type="checkbox"/> Online <input type="checkbox"/> Hybrid <input type="checkbox"/>
Course Type	Compulsory <input checked="" type="checkbox"/> Elective <input type="checkbox"/>
Lecturer(s)	Dr. Şenol Gülgönül

Course Objectives

Understand the Fundamentals: Gain a solid understanding of digital system design principles and the role of Hardware Description Languages (HDLs) in the design process.

Master Verilog HDL: Develop proficiency in Verilog HDL for modeling, designing, and simulating digital systems.

Design Combinational and Sequential Circuits: Learn to design and implement both combinational and sequential logic circuits using Verilog HDL.

Implement Digital Systems: Apply Verilog HDL to design, simulate, and verify complex digital systems, including finite state machines.

Utilize FPGA Technology: Gain hands-on experience with FPGA technology and tools for implementing digital designs.

Develop Testbenches: Create and use testbenches to verify the functionality and performance of digital designs.

Course Content	<ul style="list-style-type: none"> • Gate Level Modeling and Testbench • Data Flow Modeling • Behavioral Modeling • Sequential Logic Circuits Using Verilog • Verilog and FPGA Implementation • Microcontroller Architecture

Weekly Schedule		
No	Topics	Materials/Notes
1	Introduction	Chapter - 3
2	Simulation and Waveforms	Chapter - 3
3	Gate Level Modeling	Chapter - 3
4	Testbench	Chapter - 4
5	Data Flow Modeling	Chapter - 4
6	Combinatorial Circuits Design	Chapter - 4
7	Review	
8	Midterm Exam	
9	Behavioral Modeling	Chapter - 5

10	Sequential logic circuits using Verilog	Chapter - 5
11	FPGA Introduction	Chapter – 7
12	FPGA Applications	Chapter – 7
13	Finite State Machines	Chapter – 8
14	Microcontroller Architecture	Chapter - 8
15	Review	
16	Final Exam

i. Sufficient knowledge in the fields of mathematics, natural sciences, and related engineering disciplines; the ability to apply theoretical and practical knowledge in solving complex engineering problems.

ii. The ability to identify, formulate, and solve complex engineering problems; the ability to select and apply appropriate analysis and modeling methods for this purpose.

iii. The ability to design a complex system, process, device, or product to meet specific requirements under realistic constraints and conditions; the ability to apply modern design methods for this purpose.

iv. The ability to select and use modern techniques and tools required for the analysis and solution of complex problems encountered in engineering applications; the ability to effectively use information technologies.

v. The ability to design experiments, conduct experiments, collect data, analyze results, and interpret findings for the investigation of complex engineering problems or discipline-specific research topics.

vi. The ability to work effectively in intra-disciplinary and multidisciplinary teams; the ability to work independently.

vii. The ability to communicate effectively both orally and in writing; proficiency in at least one foreign language; the ability to write effective reports, understand written reports, prepare design and production reports, make effective presentations, and give and receive clear and understandable instructions.

viii. Awareness of the necessity of lifelong learning; the ability to access information, track developments in science and technology, and continuously renew oneself.

ix. Acting in accordance with ethical principles, knowledge of professional and ethical responsibilities, and the standards used in engineering applications.

x. Knowledge of business practices such as project management, risk management, and change management; awareness of entrepreneurship and innovation; knowledge of sustainable development.

xi. Knowledge of the impact of engineering practices on health, environment, and safety at global and societal levels, and awareness of contemporary engineering issues; awareness of the legal consequences of engineering solutions.
